

Greg MacGown, Tim Ryan, and Josh Rosenthal

Term Project Proposal

Our group will be studying the Windows Operating System and how these modern OS's handle topics that we've covered in class. At this time, we are unsure of specific areas that we want to focus on, so our first deadline is to narrow down which topics we want to focus in on by 11/2. This is definitely our most important deadline, as further progress cannot occur until we have our topic cemented. Then, by 11/9, we would like to have an outline for a structure of our research paper and submit the progress report required to Dr. Teresco. We then aim to meet the deadline on 11/16 to have a full draft of the paper pushed to GitHub and also have a solid structure for our presentation, also having some sort of diagram or demo at least in the planning stages by this point. After revisions, the final draft for the paper will be submitted on 11/21 as required in the project. Once the final draft is submitted, the presentation and diagram/demo portion will be finalized for when we will be presenting during the final exam slot.
